DESCRIPTION

Participants learn how to easily incorporate therapy-based movement into the classroom setting to enhance learning potential for all students. Nine student learner profiles are discussed (i.e. dyslexic, developmental [preschool], muddled learner/reader) with innovative and novel movement activities to support each type of learner. Participants learn ways to transfer skills taught in the therapy room to the classroom setting for optimizing learning. Through the use of S'cool Moves activities students improve motor planning, rhythm, timing, core strength, vestibular activation, hemispheric integration, and sensory-motor systems within the context of academic skill acquisition. As always, S'cool Moves is all about collaboration, so therapists and teachers will grow in their understanding of approaching learning and reading as a team sport. This course deepens participants' understanding of how to support learners and struggling readers using a neurodevelopmental approach.

LEARNING OBJECTIVES

At the end of this seminar the participant will be able to:

1. List 5 specific ways to provide support for children with cognitive delays that are affecting learning and literacy skills.
2. Articulate the 9 profiles of learners (dyslexic, developmental, reluctant, muddled, and theta learner/reader) and explain 5 therapeutic activities to support each type of learner.
3. Differentiate learning for small group and one on one instruction with a focus on integrating academics with physical foundation skills.
4. Identify 7-10 techniques to improve student's overall coordination, motor planning skills, body awareness, and visual tracking skills as they relate to academic skills in the classroom.
5. Articulate 5 ways to provide therapeutic interventions for literacy challenges.
6. List 4 multisensory approaches that support students with co-morbid ADHD, sensory processing dysfunction, dyslexia, developmental delays, or autism spectrum.
